(54) VEHICLE ACCIDENT CIRCUMSTANCES AUTOMATIC COLLECTION SYSTEM

(57) Abstract:

PROBLEM TO BE SOLVED: To provide a vehicle accident circumstances automatic collection system capable of immediately obtaining the vehicle accident circumstances by an insurance company and automatically preparing a document required at the time of accident.

SOLUTION: In vehicle A and vehicle B, CCD camera is acted to photograph a front side of the vehicle and the photographed data, various kinds of sensor information (tachometer, speed, operation history or the like), GPS data and impact degree/direction detection data are stored in a flash memory. When the vehicles A, B receive the impact, previously memorized bill number, car number and kind of car or the like are combined to make a vehicle condition information with the image and it is transmitted to an accident receiving site 3 through a network (ADSL). The accident receiving site 3 receives and stores the vehicle condition information with the image from a vehicle accident image accommodation/transmitting device 1 of the vehicles A, B. When the informing of the accident exists, the vehicle condition information with the image corresponding to

the informed car number and bill number is drawn, and a vehicle accident receiving list with the image is automatically prepared based on the both informations.
